## **EXAMINER'S AMENDMENT**

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Ms.

Caroline J. Swindell on February 13, 2006.

The application has been amended as follows:

**In the Specification, page 14, replace the third paragraph with the following paragraph:**

Referring to Fig. 5, a flow diagram of a method of storing data in a storage medium forming part of a system such as that of Fig. 3 is shown. An application in execution on the system seeks to store a data file on a storage medium within the file system layer of the system. A request and data for storage within the file is transmitted from the application layer to the file system layer. The request includes an operation and data relating to a destination storage medium on which to store the data. The trap layer intercepts the request and the data and determines whether the storage medium selected supports the operation. The trap layer is a transparent trap layer, which intercepts requests transparently to the user and transparently to a computer application invoking the requests. When the storage medium supports the operation, the request and the data is passed on to the file system layer. When necessary, the request is modified prior to provision to the file system layer. In the file system layer the operation is conducted according to normal file system layer procedures. When the storage medium does not support the operation in its original or a modified form, the trap layer returns an indication of this to the application layer. The operation and the data are not passed onto the file system layer. This provides additional access privilege functionality.
